on the table.
MW plant of Vantaa Energy, which operates entirely on wastes generated by Helsinki city. The 'combined heat and power' plant – there are quite a number of CHPs in Scandinavia – produces both power and heat. The heat is sold to the residents of the township of Vantaa, 25 km from Helsinki.

The town's water supply system absorbs the heat from hot water sent from the plant and delivers it to homes. Sales of heat brings in revenue, and helps to keep the cost of electricity down. Waste-to-energy technologies could be of use to India, officials of Vantaa Energy said.

Another global major, ABB, which has large operations in Finland, is eyeing the Indian solar sector for its upmarket '1,500 V' inverters. The 1,500 V inverters – as opposed to the incumbent 1,000V systems – are the incoming range of inverters that help further lower cost of solar power.

Energy company, Fortum, which made its first foray into solar by acquiring a 5 MW plant in India in 2012, plans for a long stay in India and is eager to showcase its expertise.

₹10,306 crore (debt and equity) in October.
